

Electronics, Electrical Engineering and Applied Physics

INTERNATIONAL MASTER OF SCIENCE

Master's degree in Telecommunications and Networks

In the context of the Covid-19 epidemic, the Conservatoire national des Arts et Métiers (le Cnam) informs that its study programs remain open to welcome international students in France in 2020-2021. These programmes will be adapted by offering distance learning courses for as long as necessary and will thus ensure the continuity of students' learning.

To date, nearly 96% of the Cnam's courses are delivered or available via distance learning mode. This reflects both the institution's know-how acquired over several years and the significant investment made by the pedagogical teams since the beginning of the epidemic.

The Master's degree in Telecommunications and Networks of department **Electronics, Electrical Engineering and Applied Physics** extends its deadline of admission until **end of July 2020**.
